PROFESSIONAL SUMMARY

Computer Science graduate with strong foundations in Python, SQL, machine learning, and data analysis. Experienced in preparing, cleaning, transforming, and analyzing large datasets using Pandas and NumPy. Built machine learning solutions for intrusion detection using CICIoT2023 data and developed interactive Streamlit dashboards. Familiar with ETL concepts, exploratory data analysis (EDA), Git, and Linux. Seeking AI Engineer Fresher focused on scalable data processing and analytics.

SKILLS

- **Java -DSA, Python(basic), SQL (MySQL)**
- **ML & Data: Scikit-learn, Pandas, NumPy, SHAP, XGBoost, Random Forest**
- **Tools: Git, GitHub, Linux, Streamlit**
- **Domain: Machine Learning, Deep Learning, TensorFlow**

EXPERIENCE

- Kyndryl - Infrastructure Specialist | June 2026 – July 2026
  - Worked with internal enterprise tools while following organizational documentation and operational procedures.
  - Gained experience in professional IT service management within a large enterprise environment.

EDUCATION

- B.Tech Computer Science and Engineering| Galgotias University CGPA *7.4 |2022-26*
- XII (CBSE) | Divine Sainik School *69.00%|2020*
- X (CBSE) | Divine Sainik School *85.02 %|2018*

ACADEMIC PROJECTS

- ***Intrusion Detection System using Machine Learning (IoT IDS) -*** Processed and analyzed **300,000+ network traffic records** from the CICIoT2023 dataset. Performed **data cleaning, preprocessing, feature engineering, and transformation** using Python, Pandas, and NumPy. Conducted **exploratory data analysis (EDA)** to understand attack distributions and identify data quality issues. Built reusable preprocessing workflows before model training. Trained and evaluated Random Forest, XGBoost, Decision Tree, and Voting Ensemble models. Applied SHAP for explainable AI. Random Forest achieved highest accuracy with score of 99.6%.
- ***Real-Time Network Traffic Analyzer Dashboard-*** Parsed network traffic logs. Automated preprocessing of incoming traffic data. Built data visualization pipeline. Processed structured datasets for real-time monitoring. Enabled identification of suspicious traffic patterns for improved network visibility. Optimized data handling for responsive and efficient visualization.
